65K lower matrix phosphoprotein - human cytomegalovirus (strain AD169)

N;Alternate names: protein ULB3
C;Species: human cytomegalovirus, human herpesvirus 5
C;Dacession: A26793; SoB847
R;Rueger, B.; Klages, S.; Walla, B.; Albrecht, J.; Fleckenstein, B.; Tomlinson, P.; Barri J. Virol. 61, 446-453; 1987
A;Title: Primary structure and transcription of the genes coding for the two virion phosy A;Title: Primary structure and transcription of the genes coding for the two virion phosy A;Title: Primary structure and transcription of the genes coding for the two virion phosy A;Title: Primary structure and transcription of the genes coding for the two virion phosy A;Reference number: A93028; MUID:87112940; PMID:3027374
A;Residues: 1-561 <RUE>
A;Residues: 1-561 <RUE>
A;Residues: 1-561 <RUE>
A;Residues: Bankier, A.T.; Beck, S.; Bohni, R.; Brown, C.M.; Cerny, R.; Horsnell, T.; F. M.; Barrell, B.G.
Curr. Top. Microbiol. Immunol. 154, 125-169, 1990
Curr. Top. Microbiol. Immunol. 154, 125-169, 1990
A;Title: Analysis of the protein-coding content of the sequence of human cytomegalovirus A;Reference number: S09749; MUID:90269039; PMID:2161319
A;Reference number: G09749; MUID:90269039; PMID:2161319
A;Genesion: S09847

A;Status; nucleic acid sequence not shown, translation not shown A;Molecule type: DNA

A;Residues: 1-561 <CHE>
A;Residues: 1-561 <CHE>
A;Cross-references: EMBL:X17403; NID:959591; PIDN:CAA35357.1; PID:91780861
A;Note: this sequence was submitted to the EMBL Data Library, December 1989
C;Genetics:

A;Introns: 93/3 C;Superfamily: cytomegalovirus lower matrix phosphoprotein C;Keywords: matrix protein; phosphoprotein

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"Leucine-zipper dimerization motif encoded by the AF17 gene fused to reconstruct acute leukemia.";

Proc. Natl. Acad. Sci. U.S.A. 91:8107-8111(1994).

-!- SIDCELLUIAR LOCATION: Nuclear (Potential).

-!- SIDCELLUIAR LOCATION: Nuclear (Potential).

-!- DISEASE: Involved in acute leukemias through a chromosomal translocation t(11;17)(q23;q21) that involves MLL/HRX and MLTG.

-!- SIMILARITY: Contains 2 PHD-type zinc fingers.

-!- SIMILARITY: HIGH, TO ARIO.

-!- SIMILARITY: HIGH, TO ARIO.

-!- COFACTOR: Requires calcium ions (By similarity).
-!- SIMILARITY: Belongs to the protein arginine deiminase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  16-OCT-2001 (Rel. 40, Created)

OCCURRED OR WHEN UNLIGATED DNA IS PRESENT. BINDS TO AND
PHOSPHORYLATES CDC25A, CDC25B AND CDC25C. PHOSPHORYLATION OF
CDC25C. CREATES A BINDING SITE FOR 14.3-3 PROTEIN WHICH INHIBITS
CDC25C. THIS PREVENTS ACTIVATION OF THE CDC2-CYCLIN B COMPLEX AND
PREVENTS MITOTIC ENTRY. PHOSPHORYLATES CDC25C ON SERINE-216.
-!- SUBCELLULAR LOCATION: Nuclear.
-!- TISSUE SPECIFICITY: Expressed ubiquitously with the most abundant
expression in thymus, testis, small intestine and colon.
-!- THY: Phosphorylated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SIMILARITY: Belongs to the Ser/Thr family of protein kinases. Mbeguie-A-Mbeguie D., Fils-Lycaon B.R.;
Molecular cloning and nucleotide sequence of a 60S ribosomal protein
L1 from apricot (Prunus armeniaca cv. Bergeron).";
Submitted (MAR-1999) to the EMBL/GenBank/DDBJ databases.
-- SIMILARITY: Belongs to the L4E family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Prunus armeniaca (Apricot).
